REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or fairly teach a plurality of supporting seats installed on a grinding machine, the supporting seats being made of high hardness material with low friction factor; two locating pins positioned on the supporting seats, one end of the locating pin being inserted into one end of the ceramic element to fix it firmly; a grinding wheel installed under the ceramic element that can be rotated to grind the ceramic element, and a plurality of driving wheels installed on a driving shaft, the driving wheels touching the top of the ceramic element and the locating pins respectively to drive them to rotate simultaneously. The closest art of record, to D'Errico, teaches an attachment in a centerless grinding machine, the attachment providing dead centers supported in seats hanging from a bar over the workpiece, the grinding wheel next to the workpiece, and a roller that drives the workpiece positioned on the opposite side of the workpiece. The centers are not in contact with the roller, and are free to rotate relative to the workpiece. It is the examiner's position that the claimed invention, while similar to that of D'Errico, is patentably different.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
